

# Reducing Boys' Gender Bias & Improving Girls' Anticipated Fit in STEM

ENGENDERING SUCCESS IN STEM

How can we encourage girls to consider STEM as viable career paths? We research middle school students.

## Theories & Data Behind Our Research<sup>1</sup>

## Our Interventions & Results<sup>1</sup>

We studied several middle school science camps (1200+ participants) over 3 summers.

### For Girls

Baseline: boys' interest & current/future fit in STEM > than girls

#### Female STEM role model shared stories of:

Communal values

Self-expression in STEM

Inclusion by STEM boys & non-STEM girls

Result: improved girls' identity fit & interest in STEM

### For Boys

Baseline: boys stereotype girls as having lower STEM abilities

#### Near peer male STEM role model shared stories of:

I work hard to make my family proud!

Value affirmation  
(stalls potential backlash or defensiveness)<sup>14</sup>

Persuasive message<sup>16</sup>  
& anecdote from a persuasive source<sup>15</sup>

Result: boosted boys' belief in girls' STEM competence

Next steps: distributing intervention for boys to more settings; reiterating & refining girls' intervention.

## About Project PRISM

How can we make STEM a more attractive and meaningful option for adolescent girls and boys alike? Project PRISM (Promoting Rising Inclusion and STEM Motivation) investigates best practices for boosting girls' belonging in STEM, while bolstering boys' respect for girls' abilities. To combat obstacles girls may face in pursuing a STEM career, Project PRISM tests interventions that: (1) change boys' beliefs about girls via implicit bias training and presenting real evidence that test scores underestimate girls' abilities, (2) expose girls to successful role models who share their values and preferences, and (3) encourage girls to identify with STEM by recognizing that a STEM career can help them accomplish some of their most cherished goals.

## About Engendering Success in STEM (ESS)

Engendering Success in STEM (ESS) is a research partnership focused on evidence-based solutions to foster positive working environments for people in STEM (Science, Technology, Engineering, and Math). We bring together social scientists, STEM experts, and stakeholders in STEM industry and education to use an evidence-based approach to break down barriers people face on their pathway to success. Canada's Social Sciences and Humanities Research Council reviewed and funded this project.
